U.S. PATENT APPLICATION

Optical Lens Coating

Inventor:

Abby Ayoub

Field of the Invention

The invention relates to optical lens coatings, in particular the application of a coating to an optical lens used in eyeglasses.

Background

Eyeglass lenses set in frames have aesthetic problems. Often the lens is thicker than the frame, and the edge of the lens has a noticeable white film. Viewing eyeglasses from the side, the edge of the lens can extend beyond the edge of the frame, thus making the eyeglasses less cosmetically appealing because the white filmy edge contrasts with the color of the frame.

One solution is to polish the edge of the lens to eliminate the white film. Polishing is often used with rimless frames. However, polishing the edge of a lens used in a frame other than a rimless frame can make the edge of the lens stand out even more. Further, polishing the edge of the lens can allow more light to enter the lens from the side, thereby increasing the glare to the wearer's eye.

Summary

It would be desirable to have a technique to enhance the cosmetic appearance of eyeglasses by reducing the appearance of

the white film on the edge of an optical lens and reducing the appearance of the white ring appearing along the perimeter of the face of an optical lens.

By applying a colored coating to the edge of an optical lens, the cosmetic appearance of eyeglasses may be enhanced by reducing the appearance of the white film on the edge of an optical lens and by reducing the appearance of the white ring along the perimeter of the face of an optical lens, and the glare of the optical lens produced by light entering through the edge of the lens may be reduced.

It is to be understood that both the foregoing general description and the following detailed description are exemplary and explanatory and are intended to provide further explanation of the invention as claimed.

Detailed Description

Many people with strong eyeglass prescriptions avoid wearing glasses because their lenses are thicker than the frame in which the lenses sit. Such lenses are quite noticeable because the white film that appears on the edge of the lens contrasts with the color of the eyeglass frame. One embodiment of the invention is directed to enhancing the cosmetic appearance of eyeglasses by reducing the appearance of this white film that appears on the edge of the lens applying a

colored coating to the edge of the lens, the colored coating matching the color of the frame into which the lens will sit.

The fashion industry has avoided using eyeglasses in photo shoots because of reflections in the lenses. When a particular photo requires the model to wear glasses, the lenses of the frames are traditionally removed for a number of reasons. One reason the fashion industry removes the lenses due to the glare from light reflecting off the surface of the lens. Anti-glare coating can reduce the amount of the light that reflects off the surface of the lens. However, there is also a white ring that appears along the perimeter of the face of the lens due to light entering through the edge of the lens. The edge of the lens allows light to pass through it which creates the appearance of the white ring around the perimeter of the face of the lens. This ring appearing along the perimeter of the lens face is visible to both the eyeglass wearer and others.

In a first embodiment, an opaque colored coating is applied to the edge of the lens to reduce the amount of light passing through the edge of the lens, thereby reducing the appearance of the white ring otherwise appearing along the perimeter of the lens face.

In a second embodiment, a translucent colored coating is applied to the edge of the lens to allow some light to pass

through, giving the lens a colored hue while still achieving the beneficial results.

In a third embodiment, a colored coating is chosen that contrasts with the color of the frame, giving the eyeglass wearer an additional fashion choice yet still providing the benefits of reducing the appearance of the white ring appearing along the perimeter of the lens face.

The first embodiment will now be discussed with reference to figures 1, 2a and 2b. This embodiment addresses the problems caused by the white film on the edge of the lens. Figure 1 is a three-dimensional drawing of eyeglass lens 100 having edge 110 and face 120.

Figure 2a is a side view of eyeglasses 200 having lens 100 sitting in frame 210. Lens 100 is shown with edge 110 and face 120. Lens 100 is thicker than frame 210, as shown by lens edge 110 extending beyond the borders of frame 210. In one embodiment, a colored coating is applied to lens edge 110. The color of the coating matches the color of frame 210 into which lens 100 will be inserted. By coloring edge 110 of lens 100 to match the color of frame 210, lens edge 110 cosmetically blends in with frame 210 making lens edge 110 much less noticeable from the side.

Figure 2b is a front view of eyeglasses 200. Frame 210 has a lens having face 120. White ring 220 on lens face 120

encircles the perimeter of lens face 120 when light passes through lens edge 110 (shown in Figure 2a). In this embodiment, applying an opaque coating to lens edge 110 (shown in Figure 2a) blocks light from entering through lens edge 110, which reduces or eliminates the appearance of white ring 220 on lens face 120. Cosmetically, lens face 120 now appears to extend all the way to frame 210 without the appearance of white ring 220 running along the perimeter of lens face 120.

The second embodiment will now be described with reference to Figures 1, 2a and 2b. In this embodiment, an opaque colored coating is applied to lens edge 110 that does not match the color of frame 210. This unmatched color enables lens edge 110 to cosmetically contrast with the color of frame 210. The contrasting opaque colored coating in this embodiment still blocks light from entering lens edge 110 thereby reducing the appearance of white ring 220.

The third embodiment will now be described with reference to Figures 1, 2a and 2b. In this embodiment, a translucent colored coating is applied to lens edge 110. Such a translucent color allows some light to enter lens 100 through lens edge 110. When lens 100 having a translucent colored coating on lens edge 110 is placed in frame 200 and viewed from the front of glasses 200, lens face 120 takes on the hue of the translucent colored coating.

One embodiment of the colored coating comprises a commercially available acrylic enamel paint or a commercially available fingernail enamel. The color of the coating may be custom mixed to match each frame style and color. Alternatively, the color can be chosen by the customer, as can whether the coating will be opaque or translucent. Optical lens scratch-coating can optionally be added to the colored coating mix which adds strength to the coating.

In an alternate embodiment, the color of the coating is matched to the color of the frame using a color matching computer system which determines the amounts of different paints to mix together to match the color of a frame placed under its sensor.

One embodiment of a method of applying the coating to a lens will now be described with reference to Figure 3. First, the lens is "edged" to the chosen frame, meaning it is cut to fit a particular frame (Step 305). Next, the lens is "saftied", meaning the sharp edge of the lens is removed so it doesn't pose a hazard to the wearer (Step 310). The lens is then wiped down with alcohol to ensure it is clean (Step 315). Enamel paint is then mixed to create the desired color of the coating (Step 320). The colored coating is then applied to the lens edge 110 using a paint brush or other paint applicator (Step 325). The lens is then allowed to dry (Step 330). An optional second coat

of the colored coating is then applied to lens edge 110, and the lens is again allowed to dry (Steps 235 and 240). Any excess colored coating that may have spilled on to face 120 of the lens is removed using commercially available paint thinner which may be acetone-based or non-acetone-based. The lens is then placed under an ultraviolet light to help the colored coating to dry (Step 245). Alternatively, the lens may be placed in a hot air blower or a frame warmer. The lens is then dipped in scratch-guard coating to help prevent the colored coating from chipping (Step 250). Alternatively, the scratch-guard coating may be added to the colored coating when the colored coating is mixed in Step 220. Finally, the lens is again allowed to dry (Step 255).

It is to be understood that that the embodiments do not require applying the colored coating to the entire edge of an optical lens. For example, with reference to eyeglasses 200 in Figure 2a in an alternate embodiment, the colored coating is applied only to that portion of edge 110 of lens 100 not covered by frame 210.

It will be apparent to those skilled in the art that various modifications and variations can be made in the system and processes of the present invention without departing from the spirit or scope of the invention. Thus, it is intended that the present invention cover the modifications and variations of

this invention provided they come within the scope of the appended claims and their equivalents. In this context, equivalents means each and every implementation for carrying out the functions recited in the claims, even if not explicitly described herein.

532781_1

Claims

I claim:

1. An apparatus, comprising:
 - a lens having an edge; and
 - a colored coating affixed to at least a portion of the edge of the lens.
2. The apparatus of claim 1 further comprising:
 - a scratch coating affixed to the lens.
3. The apparatus of claim 1 wherein the colored coating is opaque.
4. The apparatus of claim 1 wherein the colored coating is translucent.
5. The apparatus of claim 1 further comprising an eyeglass frame having a color wherein the lens is affixed to the eyeglass frame.
6. The apparatus of claim 5 wherein the color of the colored coating matches the color of the eyeglass frame.
7. The apparatus of claim 5 wherein the color of the colored coating does not match the color of the eyeglass frame.
8. The apparatus of claim 1 wherein the colored coating is not affixed to the face of the lens.
9. A method of applying a colored coating to a lens having an edge, comprising:

applying the colored coating to at least a portion of the edge of the lens.

10. The method of claim 9 further comprising:

removing any excess colored coating from the face of the lens.

11. The method of claim 9 further comprising:

applying a scratch-guard coating to the lens.

12. The method of claim 9 further comprising placing the lens under a heat source.

13. The method of claim 10 wherein the heat source is an ultraviolet light.

14. The method of claim 9 wherein the colored coating is opaque.

15. The method of claim 9 wherein the colored coating matches the color of an optical frame for the lens.

16. The method of claim 9 further comprising allowing the colored coating to dry before placing the lens under the heat source.

Abstract

An optical lens having a colored coating affixed to the edge of the lens. The apparatus may enhance the cosmetic appearance of eyeglasses by reducing the appearance of the white ring appearing along the perimeter of the face of lens when viewing eyeglasses from the front, and by reducing the appearance of the white film on the edge of lenses when viewing eyeglasses from the side. The apparatus may also reduce the glare of the optical lens from light entering through the edge of the lens.

To the inventor(s):

The following are cited in or pertinent to the declaration attached to the accompanying application:

Title 37, Code of Federal Regulation, § 1.56

Duty to disclose information material to patentability.

(a) A patent by its very nature is affect with a public interest. The public interest is best served, and the most effective patent examination occurs when, at the time an application is being examined, the Office is aware of and evaluates the teachings of all information material to patentability. Each individual associated with the filing and prosecution of a patent application has a duty of candor and good faith in dealing with the Office, which includes a duty to disclose to the Office all information known to that individual to be material to patentability as defined in this section. The duty to disclose information exists with respect to each pending claim until the claim is canceled or withdrawn from consideration, or the application becomes abandoned. Information material to the patentability of a claim that is canceled or withdrawn from consideration need not be submitted if the information is not material to the patentability of any claim remaining under consideration in the application. There is no duty to submit information which is not material to the patentability of any existing claim. The duty to disclose all information known to be material to patentability is deemed to be satisfied if all information known to be material to patentability of any claim issued in patent was cited by the Office or submitted to the Office in the manner prescribed by §§1.97(b)-(d) and 1.98. However, no patent will be granted on an application in connection with which fraud on the Office was practiced or attempted or the duty of disclosure was violated through bad faith or intentional misconduct. The Office encourages applicants to carefully examine:

- (1) prior art cited in search reports of a foreign patent office in a counterpart application, and
- (2) the closest information over which individuals associated with the filing or prosecution of a patent application believe any pending claim patentably defines, to make sure that any material information contained therein is disclosed to the Office.

Title 35, U.S. Code § 101

Inventions patentable

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Title 35 U.S. Code § 102

Conditions for patentability; novelty and loss of right to patent

A person shall be entitled to a patent unless –

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for patent,
- (b) the invention was patented or described in a printed publication in this or foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States, or

(c) he has abandoned the invention, or

(d) the invention was first patented or caused to be patented, or was the subject of an inventor's certificate, by the applicant or his legal representatives or assigns in a foreign country prior to the date of the application for patent in this country on an application for patent or inventor's certificate filed more than twelve months before the filing of the application in the United States, or

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent, or

(f) he did not himself invent the subject matter sought to be patented, or

(g) before the applicant's invention thereof the invention was made in this country by another had not abandoned, suppressed, or concealed it. In determining priority of invention there shall be considered not only the respective dates of conception and reduction to practice of the invention, but also the reasonable diligence of one who was first to conceive and last to reduce to practice, from a time prior to conception by the other ...

Title 35, U.S. Code § 103

Conditions for patentability; non-obvious subject matter

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Subject matter developed by another person, which qualifies as prior art only under subsection (f) or (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

Title 35, U.S. Code § 112 (in part)

Specification

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise and exact terms also enable any person skilled in the art to which it pertains, or with which it is mostly nearly connected, to make and use the same, and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Title 35, U.S. Code § 119

Benefit of earlier filing date in foreign country; right of priority

An application for patent for an invention filed in this country by any person who has, or whose legal representatives or assigns have, previously regularly filed an application for a patent for the same invention in a foreign country which affords similar privileges in the case of applications filed in the United States or to citizens of the United States, shall have the same effect as the same application would have if filed in this country on the date on which the application for patent for the same invention was first filed in such foreign country, if the application in

this country is filed within twelve months from the earliest date on which such foreign application was filed; but no patent shall be granted on any application for patent for an invention which had been patented or described in a printed publication in any country more than one year before the date of the actual filing of the application in this country, or which had been in public use or on sale in this country more than one year prior to such filing.

Title 35, U.S. Code § 120

Benefit or earlier filing date in the United States

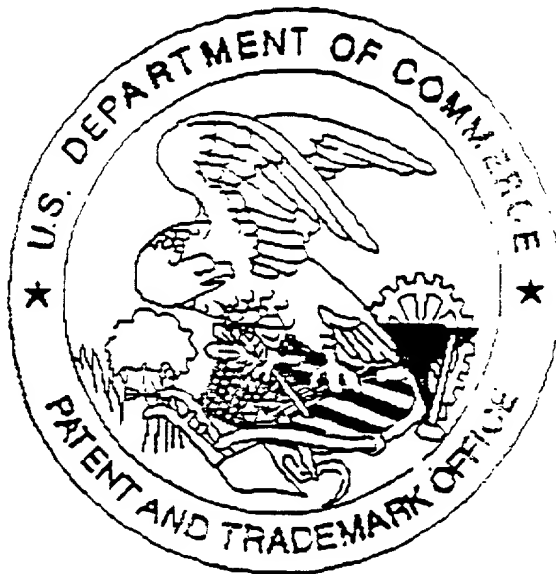

An application for patent for an invention disclosed in the manner provided by the first paragraph of section 112 of this title in an application previously filed in the United States, or as provided by section 363 of this title, which is filed by an inventor or inventors named in the previously filed application shall have the same effect, as to such invention, as though filed on the date of the prior application, if filed before the patenting or abandonment of or termination of proceedings on the first application or an application similarly entitled to the benefit of the filing date of the first application and if it contains or is amended to contain a specific reference to the earlier filed application.

Please read carefully before signing the Declaration attached to the accompanying Application.
